5B38 Isolated, Wide-Bandwidth Strain Gage Input Functional Description

The 5B38 is a wide-bandwidth single-channel signal conditioning module that interfaces, amplifies, and filters signals from full-bridge and half-bridge strain-gage transducers

between 300 Ω and 10 k Ω . The module provides an isolated bridge excitation of +10 V and a protected, isolated precision output of -5 V to +5 V. The 10 kHz bandwidth of the module ideally suits to measure signals that vary rapidly with time, such as strain on an automobile chassis during a crash test.

The 5B38 protects the computer side from damage due to field-side overvoltage faults. The module withstands 240 V rms at its input terminals without damage, thereby shielding computer-side circuitry from field-side overvoltage conditions. In addition, the 5B38 is mix-and-match and hot-swappable with all 5B Series modules, so can be inserted or removed from any socket in the same backplane without disrupting system power.

The 5B38-04 contains bridge completion circuitry, so can function with half-bridge strain gages. For quarter-bridge requirements, the user must complete the bridge input to the half-bridge level externally. The factory can configure the module for a wide range of input ranges (sensitivities).

Inside the 5B38 Module

A single-pole anti-aliasing filter resides at each modules input. A three-pole, low-pass filter in the output stage sets the bandwidth and yields optimal noise performance for accurate measurement of small signals in high electrical noise. A chopper-stabilized input amplifier provides low drift and stable gain.

Signal isolation by transformer coupling uses a proprietary modulation technique for linear, stable and reliable performance. The differential input circuit on the field side is fully floating, eliminating the need for any input grounding. A demodulator on the computer side of the signal transformer recovers the original signal, which is then filtered and buffered to provide a low-noise, low-impedance output signal. An additional benefit, the output section acts as a third floating port, eliminating possible problems from ground loops and power-supply noise. The output common must be kept within ±3 V of power common.

Convenience Features

A series output switch eliminates the need for external multiplexing in many applications. The switch is turned on by an active-low enable input. The enable input should be grounded to power common if the output need not be switched, as on the 5B01 and 5B08 backplanes.

Input Type Strain Gage: Full-Bridge/Half-Bridge Output Ranges -5 V to +5 V

5B38 Models Available

Model	Input Bridge Type	Bridge Range	Excitation	Sensitivity	Output Range
5B38-02	Full Bridge	$_{300}\Omega_{to10k}\Omega$	+10.0 V	3 mV/V	-5 V to +5 V
5B38-04	Half Bridge	$_{\rm 300}\Omega_{\rm to10k}\Omega$	+10.0 V	3 mV/V	-5 V to +5 V
5B38-05	Full Bridge	$_{\rm 300}\Omega_{\rm to10k}\Omega$	+10.0 V	2 mV/V	-5 V to +5 V
5B38-Custom	*	$_{300}\Omega_{to10k}\Omega$	+10.0 V	*	-5 V to +5 V

* Custom Input/sensitivity ranges are available. Refer to configuration guide.
